

# Astec energy Congo Republic

Who is Congo energy?

Exclusive distributor of PRAMAC products in the DRC, Congo Energy offers a wide range of reliable and efficient generator sets. Our energy solutions cover various sectors, from light industry to specific infrastructures such as health and data centers. Thanks to our expertise, we offer tailor-made solutions and efficient after-sales service.

What certificate does Congo energy have?

Congo Energy has the certificate issued by ARSP (Autorit  de R gulation de la sous-traitance dans le secteur priv ). This certificate certifies that Congo Energy is authorized to work as a subcontractor in the Democratic Republic of Congo. Congo Energy strives to provide its partners and customers with high-quality products and services.

Who makes Pramac products in the DRC?

In order to offer high-quality innovative products, Congo Energy has concluded partnerships with international companies recognised in their sector of activity: Congo Energy is the exclusive distributor of PRAMAC products in the DRC, offering a wide range of generator sets, from 10 to 4,000 kVA, as well as after-sales service.

Could the Congo become an electricity exporter?

Almost all electricity generation today comes from hydropower and the Inga project has the potential to provide much more. If network constraints are addressed, Democratic Republic of the Congo could become an electricity exporter.

How does the Democratic Republic of the Congo support the economy?

In the AC, Democratic Republic of the Congo supports an economy six-times larger than today's with only 35% more energy by diversifying its energy mix away from one that is 95% dependent on bioenergy.

What is the government's vision for power generation in Congo?

The government's vision is to increase the service level to 32 percent by 2030. Lack of access to modern electricity services impairs the health, education, and income-generating potential of millions of Congolese people. Most power generation development is directed and funded by mining companies seeking to power their facilities.

Rapidly swirling, high-energy air is the key to the Fury burner's efficient combustion. The swirling air and flame are created by the fixed internal spin vanes, high-pressure blower, and high-velocity nose. The Astec designed pre-filming fuel nozzle uses the combustion air from the high-pressure blower to atomize fuel.

A unique roller bearing design reduces operating expenses by up to 50 percent, while improving production and energy efficiency compared to bushing crushers. Our portable cone crushing plants meet coarse and fine crushing application requirements and offer on-the-fly adjustability for easy operation. ... KPI-JCI and Astec Mobile Screens 700 ...

There are two main classes of aggregates: natural and manufactured. Natural Aggregates. Natural aggregates come from sand and gravel deposits. These formations often contain materials like clays and silts that must be thoroughly processed out before using the sand and gravel in commercial applications.

The country exported its first LNG cargo from Eni's Congo LNG project earlier this year and is expected to start Phase 2 of the project in 2025. Targeting three million tons per annum, the project is set to position Congo as a major LNG player in the region. "Gas is the most viable solution for the energy transition, and we
