Do energy storage systems perform well with a suboptimal architecture?

It is possible for an energy storage system with a good storage technology to perform poorly when implemented with a suboptimal architecture, while other energy storage systems with mediocre storage technologies can perform well when implemented with superior architectures.

What makes a successful energy storage system?

A successful implementation depends on how well the energy storage system is architected and assembled. The system's architecture can determine its performance and reliability, in concert with or even despite the technology it employs.

What is a battery energy storage system (BESS)?

To address this challenge, battery energy storage systems (BESS) are considered to be one of the main technologies. Every traditional BESS is based on three main components: the power converter, the battery management system (BMS) and the assembly of cells required to create the battery-pack.

Why do we need battery energy storage systems?

Fluctuations in electricity generation due to the stochastic nature of solar and wind power, together with the need for higher efficiency in the electrical system, make the use of energy storage systems increasingly necessary. To address this challenge, battery energy storage systems (BESS) are considered to be one of the main technologies.

Can a battery reliability analysis be replicated in AC BESS applications?

Finally, it is worth mentioning that the methodology employed in this research can be replicated in AC BESS applications with the aim of identifying the most relevant factors for battery reliability analysis. Xabier Dorronsoro is the first author and has developed the core of the work.

Are new technology solutions required for more reliable modular battery-packs?

With the results obtained in this research, it is numerically demonstrated that new technological solutions towards more reliable modular BESSs are mandatory. In parallel, this improvement may enable the incorporation of new control strategies and new replacement systems of damaged battery-packs.
