

Can solar-plus-storage systems be a cost-competitive source of energy in China?

The decline in costs for solar power and storage systems offers opportunity for solar-plus-storage systems to serve as a cost-competitive source for the future energy system in China. The transportation, building, and industry sectors account, respectively, for 15.3, 18.3, and 66.3% of final energy consumption in China ( 5 ).

How much energy can a CSP plant store?

The newer CSP plants have significant storage capacity from 5 to 8.5 h using 2 tank-indirect storage configurations. Nevertheless, the fact that more than half of the plants do not allow for energy storage is a sign of a need to develop and integrate energy storage systems for this CSP configuration. 4.2.
