

What is a wearable microgrid?

UC San Diego nanoengineers call it a "wearable microgrid"-- it combines energy from the wearer's sweat and movement to provide sustainable power for wearable devices. Nanoengineers at the University of California San Diego have developed a "wearable microgrid" that harvests and stores energy from the human body to power small electronics.

What is a wearable e-textile microgrid system?

Inspired by this notion, we herein propose and demonstrate the concept of a wearable e-textile microgrid system: a multi-module, textile-based system with applications powered by complementary and synergistic energy harvesters and commensurate energy storage modules.

Which MCU is suitable for the wearable microgrid system?

BG, blood glucose concentration. An ultra-low-power MCU (nRF52832, 6 mm), capable of operating below 1.7 V and suitable for BLE, was selected for the wearable microgrid system. The BFC charging the AgCl-Zn batteries energy system generates a higher open-circuit voltage of 2 V, which can directly power the fPCB without needing a voltage booster.

What is wearable bioenergy microgrid?

In summary, we have demonstrated the concept of wearable bioenergy microgrid via a textile-based multi-module system for sequentially harvesting biomechanical and biochemical energy via the TEG and BFC modules.

What is the integrated fingertip-wearable microgrid system?

The integrated fingertip-wearable microgrid system offers a sustainable autonomous power supply, miniaturization, self-regulation, on-demand multisensory biomarker detection, safety and comfortable wearability.

How does a microgrid work?

The microgrid can store and regulate the harvested energy via efficiently paired SC modules to efficiently power wearable applications such as an LCD wristwatch and a sensor-ECD system.

We conclude by discussing the prospects for developing more efficient and sustainable wearable microgrids for higher power applications, through accurate and smart energy budgeting and regulation involving artificial intelligence and advanced algorithms towards dynamic data-driven prediction of rapidly changing power supply and demands.

The wearable microgrid was tested on a subject during 30-minute sessions that consisted of 10 minutes of either exercising on a cycling machine or running, followed by 20 minutes of resting. The moves were enough

to power either an ...

A fingertip-wearable microgrid system for autonomous energy management and metabolic monitoring  
Published in: Nature Electronics, September 2024 DOI: 10.1038/s41928-024-01236-7: Authors:

A fingertip-wearable microgrid system for autonomous energy management and metabolic monitoring. S Ding, T Saha, L Yin, R Liu, MI Khan, AY Chang, H Lee, H Zhao, Y Liu, ... Nature Electronics 7 (9), 788-799, 2024. 3: 2024: The system can't perform the ...

A fingertip-wearable microgrid system for autonomous energy management and metabolic monitoring ...  
Empirical Study on Initial Trust of Wearable Devices Based on Product Characteristics; A Survey of the Development of Wearable Devices; Flexible and Wearable Power Sources for Next-Generation Wearable Electronics;

Empirical Study on Initial Trust of Wearable Devices Based on Product Characteristics; A Survey of the Development of Wearable Devices; Flexible and Wearable Power Sources for Next-Generation Wearable Electronics; The Promise and Perils of Wearable Technologies; The Wearable Level for Wearable Devices; Trust matters: Adoption of wearable ...

This system utilizes a high-efficiency, self-voltage-regulated wearable microgrid, composed of enzymatic biofuel cells (BFCs) and silver chloride-zinc (AgCl-Zn) batteries, to harvest and store...

Two wearable applications were selected as examples of two operating modes for demonstrating the potential and advantages of the wearable microgrid system (Fig. 6a). The SC is an attractive energy storage module owing to its flexible discharge rates that allow powering of either low-power application continuously or of high-power application in ...

Abstract Energy-autonomous wearable systems and wearable microgrids have been a focus of developing the next-generation wearable electronics due to their ability to harvest energy and to fully support the sustainable operation of wearable electronics. However, existing bioenergy harvesters require complex and low-efficiency voltage ...

Energy-autonomous wearable systems and wearable microgrids have been a focus of developing the next-generation wearable electronics due to their ability to harvest energy and to fully support the sustainable operation of wearable electronics. However, existing bioenergy harvesters require complex and low-efficiency voltage regulation circuitry and have not achieved reliable ...

Just as a community microgrid combines different power sources with energy storage, a wearable microgrid developed at the University of California San Diego integrates different energy harvesting technologies to power small electronics. The wearable e-textile microgrid system is composed of sweat-powered biofuel cells, motion-powered ...

Here, we introduce the concept and design principles of e-textile microgrids to the world of wearable electronics by demonstrating the operation of a multi-module bioenergy microgrid system. Unlike earlier hybrid wearable energy systems, the presented e-textile microgrid relies solely on human movements to work synergistically, harvesting ...

Setting this wearable apart, the researchers added, is that the device is powered by the sweat that it analyzes. Source: Shichao Ding. According to its developers, those wearing the sweat-powered device, which fits around the wearer's finger, can be monitored while they are at rest or asleep, and the device can continue to harvest energy from the wearer's fingertip ...

By applying the wearable microgrid design concept, we present a wearable, wireless, energy-autonomous, multiplexed sweat sensing system that operates on the fingertip. This system utilizes a high-efficiency, self-voltage-regulated wearable microgrid, composed of enzymatic biofuel cells (BFCs) and silver chloride-zinc (AgCl-Zn) batteries, to ...

A fingertip-wearable microgrid system for autonomous energy management and metabolic monitoring. S Ding, T Saha, L Yin, R Liu, MI Khan, AY Chang, H Lee, H Zhao, Y Liu, ... Nature Electronics 7 (9), 788-799, 2024. 3: 2024: Single-atom materials boosting wearable orthogonal uric acid detection.
