

What is French Polynesia's energy transition plan?

French Polynesia's energy transition plan has three main objectives: Change the energy model, by gradually replacing the use of fossil fuels with renewable energies in all activities

Does French Polynesia rely on hydrocarbons?

French Polynesia, like most island territories, is highly dependent on hydrocarbon imports. In 2019, 93.8% of energy consumed in the archipelagos came from imports of various petroleum-based fuels. The renewable energy penetration rate in power generation stood at 28.78% in 2019. This figure has remained stable over the last five years.

How much electricity does French Polynesia use?

French Polynesia, whose per capita gross domestic product is the second highest among Pacific Islands, is also above average in its per capita electricity consumption. Electricity per inhabitant is 2468 (kWh).

This represents 0.00% of global energy consumption. French Polynesia produced 1,937,494,000 BTU (0.00 quadrillion BTU) of energy, covering 13% of its annual energy consumption needs. Non Renewable (Fossil Fuels) Energy Consumption. 90%

In a three-day event held from 19 to 21 March 2024, the Clean energy for EU islands secretariat convened stakeholders in Puna'auia, Tahiti, French Polynesia. The workshop aimed to address the pressing technical and legislative hurdles hindering the energy transition in French Overseas Territories.
