

# Energy storage system grid-connected performance test

What is a battery energy storage system?

Battery Energy Storage Systems (BESS) are expected to be an integral component of future electric grid solutions. Testing is needed to verify that new BESS products comply with grid standards while delivering the performance expected for utility applications.

Why is energy storage important in power grid demand peaking and valley filling?

The simulation test also reveals the important role of energy storage unit in power grid demand peaking and valley filling, which has an important impact on balancing the instability of photovoltaic power generation and improving the system response ability. 1. Introduction

What is grid interconnection type testing?

Grid interconnection type testing is used to verify that the battery energy storage system properly performs its application logic and complies with grid interconnection standards (such as IEEE 1547) over its entire operating range. This testing would be performed with a test lab setup with the equipment and monitoring links as shown in Figure 3.

What is the energy storage standard?

The Standard covers a comprehensive review of energy storage systems, covering charging and discharging, protection, control, communication between devices, fluids movement and other aspects.

What is battery energy storage system (BESS)?

Battery energy storage system (BESS) has been applied extensively to provide grid services such as frequency regulation, voltage support, energy arbitrage, etc. Advanced control and optimization algorithms are implemented to meet operational requirements and to preserve battery lifetime.

What is electrochemical energy storage system?

The electrochemical energy storage system uses lithium batteries with high cost performance, which can simultaneously play two key roles in balancing the energy input system and the adjustment of the system output power, and is a key link in the stable operation of the "photovoltaic + energy storage" power station (see Fig. 2).
