

Fengjun 7 generator light is on but not starting

What if a generator won't start?

Spark ignites the fuel and air mixture to start the engine. If your generator won't turn over, check the starter recoil on a manual start generator or the battery, starter solenoid, and wiring on an electric start generator. Reasons a Generator Won't Start: Solved! Fill with fresh fuel.

How do you repair a generator with an electric start?

Check the battery, starter solenoid, and ignition switch on models with an electric start. Place the generator on a flat-level surface, remove the spark plug wire, and wait for the engine to cool prior to performing repairs. Refer to your generator operator's manual for safety precautions. How to troubleshoot a generator starting problem?

Checking the battery is a fundamental first step in troubleshooting generator starting issues. However, differentiating between battery, charger, and other mechanical issues requires careful consideration of the symptoms and external factors.

How do I know if my generator is not starting?

Step 1: Ensure there's an adequate amount of fuel in the tank. Low or empty tanks are common causes of non-starting generators. Step 2: Confirm the fuel valve or switch is in the "On" position. Step 3: Check for stale fuel. If the fuel has been sitting for an extended period, it might be unusable.

How do you start a generator if a recoil cord is not working?

Insert the knot in the notch that's cut out in the starter cup, wrap the cord around clockwise, and pull to start your engine if the recoil cord assembly isn't working. Have your generator ready to start (choke, fuel valve open, etc) and give it a pull. The knot will fly towards you when you reach the end of the rope, so just be aware of that.

How do I know if my generator solenoid is bad?

Bad Starter Solenoid on an Electric Start Generator You may hear a clicking or humming sound when you press the ignition switch button or turn the key (depending on your model) and your generator won't start. Or, you may find the wiring is getting hot and beginning to smoke. These are indications the solenoid may be bad.
