Where can a ground-mounted solar panel be installed?

Ground-mounted solar panels can be installed anywhere with good sun exposure and sufficient amounts of open space - a minimum of 350 square feet is usually required. Ground-mounted solar panels are also known as backyard solar panels, free-standing solar panels, and ground-mount PV systems.

Can you put solar panels on a roof?

Ground mounts are more common for certain types of solar systems, like off-grid setups. But they can be used by anyone if they have the space! There are other options if your roof isn't suitable for solar panels; you can also consider a solar carport, a solar patio, or even a solar tree!

Are ground-mounted solar panels a good alternative to rooftop solar?

Ground-mounted solar panels are a great alternative for customers who want solar - but don't have a roof that's suitable for them. On top of being an alternative to rooftop solar, ground-mounted solar systems can be used on farms, in your garden, and more!

What is the difference between ground-mounted solar panels and on-roof solar panels?

Ground-mounted solar panels and on-roof solar panels differ primarily in their installation locations and associated benefits and challenges. Ground-mounted solar panels are installed on the ground, typically in open spaces, and offer greater flexibility in orientation and tilt, which can maximise energy production.

What are the different types of ground-mount solar panels?

Ground-mounted solar panels are also known as backyard solar panels, free-standing solar panels, and ground-mount PV systems. What are the different types of ground-mount solar installations?

Should I choose a roof or a ground-mounted solar system?

If your roof works for solar and can fit enough solar panels to meet your energy needs, it's usually best to choose rooftop solar panels. If you need a really large system that won't fit on your roof and you have enough open land, opt for ground-mounted panels.
