The number of watts the SCC can handle depends on the charge voltage as well. For a 250/50, it will only charge 50A. If your top charge voltage is 56V (for a "48V" system), then the handled watts are: $50A \times 56V = 2800W$. Any available watts that your array is capable of providing will be clipped (ignored, not pulled in from the SCC).
