More than 90% of Guyana's total energy supply comes from fossil fuels, with the remainder derived from renewables such as wood and sugar cane residue. Fossil fuels accounted for more than 85% of installed capacity and nearly 97% of electrical generation in 2020, complemented by small contributions from biofuels, wind, and solar energy. Guyana's officially stated goal is to ...

THE Guyana Energy Agency (GEA) reported significant progress in its renewable energy projects throughout 2023, marking a substantial step towards the country's goal of decoupling economic growth from fossil fuels and harnessing its low-carbon resources. These advancements not only addressed rising electricity demand, but also expanded ...

"Our journey to... transition away from conventional energy sources has been steady, with significant progress," the Prime Minister said. He said, too, that a significant part of Guyana's clean energy initiative is the construction of a 300 MW combined cycle gas turbine power plant, connected by a 200km subsea pipeline.
