

Is grid-scale energy storage on the rise?

By the reckoning of the International Energy Agency (iea), a forecaster, grid-scale storage is now the fastest-growing of all the energy technologies. In 2025, some 80 gigawatts (gw) of new grid-scale energy storage will be added globally, an eight-fold increase from 2021. Grid-scale energy storage is on the rise thanks to four potent forces.

Are storage technologies suited for grid-scale applications?

A review of storage technologies suited for grid-scale applications is presented. The data from the review are used for an economic feasibility analysis. The revenue is maximised over a year through a linear programming problem. The cost over revenue ratio quantifies the required incentive from support schemes.
