This is carried out through its corporate responsibility work at The Hassan Foundation. Hassan Energy has the capacity to supply and distribute high quality competitive products globally; and consistently to the required quantity, quality and environmental standards that are so critical for our clients in a range of industries.

What are the main sources of energy in France?

Energy in France was generated from five primary sources: nuclear power, natural gas, liquid fuels, renewables and coal. In 2020, nuclear power made up the largest portion of electricity generation, at around 78%. Coal energy is declining and due to cease. Renewables accounted for 19.1% of energy consumption in 2020.

Why is France a big exporter of electricity?

The country is also among the world's biggest net exporters of electricity. The country is increasingly investing in renewable energy and has set a target of 32% by 2030. In its 2021 Country report on France, the International Energy Agency warned that the country is recording delays in terms of meeting its own energy and climate goals.
