How to choose a solar energy street light?

via GIPHY Analyze the area size and choose suitable system brightness: pick a location that receives the maximum light exposure during the day, and if you live in a shady area, select systems with larger panels. Likewise, find out a suitable weather-resistance level for your solar energy street light.

How do you charge a solar panel?

To charge the solar panel on a Battery Powered LED Light, connect 1 short jumper wire from the power-in pin on the charging module to an empty spot on the breadboard. If the solar panels are producing power (ie. it's daytime), the transistor will act as a switch, preventing power from flowing through the transistor and allowing the battery to charge up. [The passage describes the process of charging the battery using a solar panel, but it does not directly answer the question about charging the solar panel itself. I have rephrased the passage to focus on the part that answers the question.]
