

The Western Power Company (WPC) project will establish a 180MW run-of-river hydroelectric power plant at Ngonye Falls on the Zambezi River in the Western Province of Zambia. The project will divert water from the river's left channel into a 3km canal served by a partly-underground plant facility. The project is managed by founders Africa ...

electric power run-of-river generating facility situated at or near the Ngonye Falls on the Zambezi River (the "Project"). The Project is sponsored by Western Power Company Ltd., Zambia (WPC). The Project is expected to have an impact on tourism activities at or near the Ngonye Falls on the Zambezi River, Zambia.

The Ngonye Power Company Limited is a joint venture by Enel Green Power of Italy, and the Industrial Development Corporation of Zambia. Ina Ruthenberg, World Bank country manager for Zambia, commented: "The Ngonye project will increase and diversify Zambia's renewable energy generation capacity and support government's objective of ...

The Ngonye Falls Hydroelectric Project is an initiative of the Western Power Company. It will be the largest run-of-river hydro project in Zambia and the largest Zambian renewable private power producer (IPP) with a 180MW capacity and 830GWh per year of energy generation. Technical Details: All technical studies including designs

Ngonye Falls is an 180MW hydro power project. It is planned on Zambezi river/basin in Western, Zambia. PT. Menu. ... Eleqtra Ltd (Eleqtra), formerly Eleqtra (Infracore) Limited, is a project development and investment firm. ... The company's service offerings include construction, project or plant development, equity investments, operations and ...

Electricity supply will be boosted by 60 megawatts thanks to an Implementation Agreement for the Ngonye Falls Hydro Electric Scheme signed between Western Power Company Ltd and the Ministry of Energy and Water Development today.

The maximum rate of energy production at any time is limited by the size of the canal and the turbines which set the 180MW capacity of the power station. An unusual feature of the Ngonye Falls project is the variation in generation head through the year caused by water levels in the narrow downstream gorge varying, depending on the flow in the ...
