

How can Niger balance its energy mix?

This transformative project, funded by the World Bank through the International Development Association (IDA), will enable Niger to better balance its energy mix, which is currently largely dominated by thermal energy. This initiative is particularly crucial for a country that frequently faces climatic shocks.

What type of energy is used in Niger?

Renewable energy here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal energy. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important energy source in lower-income settings. Niger: How much of the country's energy comes from nuclear power?

What is the energy potential of Niger?

Niger has significant energy potential, rich and varied, that is weakly exploited. It consists of biomass (firewood and agricultural residues, the main source used by households for cooking), uranium, mineral coal, oil, natural gas, hydroelectricity and solar energy.

Why is electricity important in Niger?

Availability of electricity allows people both urban and rural to increase their income and improve their living conditions through developing income generating activities. The current authorities of Niger understand that energy is the basis of any change that leads to development.

Is Niger a member of ECOWAS?

The outcome of this process has no doubt because Niger is a member of the Economic Community West African States (ECOWAS). The ECOWAS protocol on energy, which was ratified by Niger in 2005, developed on the basis of principles of the Energy Charter Treaty.

How many tons of coal are there in Niger?

Mineral coal reserves located in northern Niger are over 90 million tons. Around 70 million tons are in Salkadamna, in the Tahoua region. A project for their development should start soon, for the production of electricity and coal briquettes for cooking energy.

MECS-ThermoZ(TM) is a fully welded plate exchanger designed for use in traditional air preheat applications to recover heat from energy consuming processes. The MECS-ThermoZ is a highly efficient heat exchanger suitable for many industrial processes where gas temperatures may be up to 1500 F (815 C).
