

Is solar energy making inroads in North Korea's Power Sector?

Solar energy is making inroads into North Korea's power sector as residents are looking to install panels to have the lights on, at least partially, as the regime is failing to supply its citizens with electricity while prioritizing power to factories.

Does North Korea need solar power?

North Korea is increasingly turning to solar power to help meet its energy needs, as the isolated regime seeks to reduce its dependence on imported fossil fuels amid chronic power shortages.

Can solar power solve North Korea's energy problems?

Jeong-hyeon, a North Korean escapee, told the Financial Times that many residents in Hamhung, the second-most populous city, "relied on a solar panel, a battery and a power generator to light their houses and power their television". But solar power is still only a partial solution to the country's energy woes.

How many solar panels did North Korea import in 2017?

For example, North Korea reportedly imported over 466,000 solar panels from a single Chinese solar energy company, Sangle Solar Power, in 2017, which could indicate a lack of resources to meet its own domestic demand for renewable energy.

Why is North Korea a good country for solar energy?

North Korea's mountainous terrain and strong coastal winds provide an ideal environment for generating wind and solar energy, especially during the harsh winter season when hydro energy-generating dams and rivers are often frozen. Pyongyang has a history of utilizing its natural resources to compensate for financial difficulties.

Will North Korea's solar energy projects be successful?

North Korean media outlets have also claimed that the country's Solar Heating Equipment Distribution Agency plans to develop new technology and products using solar energy across the country, but it is unclear how successful and far-reaching these projects will be given North Korea's financial limitations.

International Front

North Korean state television reported in early 2013 that new solar-powered street lamps had been installed at various locations in the capital Pyongyang, according to North Korea Tech, a website ...

Solar energy is making inroads into North Korea's power sector as residents are looking to install panels to have the lights on, at least partially, as the regime is failing to supply ...

With this report we are proud to present our findings on solar investment opportunities in Kazakhstan. This report provides an overview of the country's business environment, major macroeconomic and demographic

trends. It also analyses issues related to credit and political risks. The report highlights Kazakhstan's energy context, key ...

Pyongyang continues to signal significant interest in expanding its renewable energy capabilities. During his 2019 New Year Address, Kim Jong Un announced that greater investment in tidal, wind, and nuclear power can contribute to solving the national power shortage issue and economic challenges posed by sanctions. Since his speech, North Korean state ...

With this report we are proud to present our findings on solar investment opportunities in India. This report provides a snapshot of India's business environment and major macroeconomic trends, and analyses issues related to the country's credit and political risk. Moreover, it characterises the country's energy context and relevant ...
