

Principle of cascade utilization of energy storage lithium batteries

Why is Cascade utilization of power batteries important?

The cascade utilization of power batteries holds tremendous potential and serves as an effective means to address energy and environmental challenges, driving sustainable development.

How has industrialization impacted the power battery recovery and Cascade utilization industries?

Abstract: The continued industrialization of new-energy vehicles has facilitated the rapid growth of the massive retired power battery drive recovery and cascade utilization industries. Improving the full lifecycle value of power batteries and recycling necessary materials has recently emerged as a hot issue.

Are enterprises involved in the Cascade utilization of power batteries?

Our study focuses on enterprises involved in the cascade utilization of power batteries, examining the timing and pros and cons of government EPR policy implementation, as well as optimal pricing decisions for supply chain members. The findings provide valuable insights for the operations of relevant enterprises and government regulatory design.

Does cascade use reduce battery waste?

Cascade use mitigates the explosive increase in battery waste. Sources of battery waste include batteries in RTBs that cannot be repurposed for cascade use and batteries eliminated from cascade use. Due to the diversity of approaches for cascade use, RTBs in particular may fail to be collected by certificated collection companies.

How does China treat lithium ion batteries?

At present, China mainly treats LIBs through cascade utilization based on their capacity retention rate: Retired LIBs with a capacity retention rate of about 70 % are generally converted into energy storage batteries for cascade utilization, while spent lithium-ion batteries (SLIBs) with a capacity retention rate of ≤ 30 % are directly recycled.

What happens to energy storage during a cascade use stage?

During the cascade use stage, the capacity for energy storage decreases as battery capacity continues to decay.
