I had my electrician run my10 or so 12 awg romex circuits into a breaker box which I intended to power directly from my 24V 2000W inverter. Your post suggests I might need a 240vac breaker box instead of the one I have which is probably a 120vac breaker box. My electrician doesn't work with solar or DC so he just did what I asked.

The issue with "roof boxes" in solar (or other roof stuff) is between the two typical ways to get wiring to a box on the roof. One way is to use a (more expensive, longer lead time) specialty box with a built in flashing, such as a Soladeck or Q-box. No problem to bring romex directly into that from the attic.

The direct bury romex is already in place and has grass grown over the top so the outside part is a given and will not be changed unless it is a clear code violation which I do not think it is. ... to start by having an engineering structural analysis of the roof of my new outbuilding to see if it can safely hold 2 solar panels! And it gets ...
