

Who are UK Power Solutions?

UK Power Solutions is one of the UK's leading Multi-Utility Connections Providers for new build residential, industrial and commercial projects. Our dedicated teams of experienced and knowledgeable engineers manage projects from the initial customer enquiry, through to design, construction, energisation and the final adoption of the network.

How can a new energy system be made in Réunion?

This includes replacing sugar cane with different food crops; restricting urbanization; increasing the capacity for producing energy from waste; significantly scaling up photovoltaics that convert sunlight directly into energy; and convincing Réunion islanders to make certain lifestyle changes.

Is electricity self-sufficiency possible on Réunion?

Although electricity self-sufficiency on Réunion is theoretically possible, there are still a number of constraints imposed by factors such as nature, technology and economics. The island's remote location and geographical features are serious challenges for starters.

What technology is needed for Réunion?

Wave energy is another option, but leading technologies from Australia and the United Kingdom are not suited for the sea conditions and industrial support found at Réunion. Bespoke solutions will be needed to tailor these kinds of technology for the island.

Will switching to renewables solve Réunion's self-sufficiency problem?

Although laudable, switching to renewables will not solve the self-sufficiency problem. The renewable sources Réunion uses to generate electricity will still be mainly imported from abroad. "Forests will be cut in Canada to put in our furnaces in Réunion island," says Mathieu David, who studies mechanics and energy at the University of La Réunion.

Why is Réunion so worried about energy imports?

Part of this concern stemmed from Réunion's over-reliance on imports, including for energy, says Russeil, who is now at the French National Research Institute for Agriculture, Food and Environment in Paris.

We repair, monitor and extend the lifecycle of turbine islands across Europe, Asia and Africa, improving power output, reducing the environmental footprint and lowering operational cost. Our 24x7 servicing capabilities range from the latest ...
