What is a sine wave solar inverter?

In the context of solar inverters, a sine wave refers to the ideal waveform of alternating current (AC) power that mimics the smooth and consistent waveform of utility-supplied electricity. Like the graphics below, the sine wave produced by pure sine wave solar inverters replicates this sinusoidal waveform, ensuring a clean and stable power supply.

How does a sine inverter work?

A sine inverter takes the DC output of your solar array, converts it to AC, and does so in a way which replicates as closely as possible the pure sine wave of grid power alternating current. Moreover, pure sine wave inverters amplify the converted current to differing strengths of wattage and voltage.

Why should you choose a pure sine wave inverter?

This is because pure sine wave is the very best power output quality. It is a clean power supply and will work with any device. Other types of sine wave can be detrimental for many devices and even reduce their lifespan. You will not have this problem with pure sine wave. Our pure sine wave inverters come with a worldwide 5 year warranty.

Can a sine wave inverter be used as a solar generator?

With this in mind, this 2,000-watt pure sine wave inverter would be a prime candidate for a DIY solar generator project. The durable aluminum case is super-ribbed all along so there shouldn't be any problems with overheating.

Why do solar inverters use pure sine electricity?

Pure sine electricity is considered the gold standard of AC waveforms because it is "clean" and free of the distortion and noise that can harm sensitive electronics when inferior inverters are used. There are numerous types of solar inverters available today.

How much does a sine wave inverter cost?

\$100-\$500 range: This is what you're likely to pay for most pure sine wave inverters on the market. These usually generate between 1,000 and 2,000 watts, so you can use one to power appliances in your off-grid cabin, RV, or boat. **\$500 and above:** This kind of money will get you a heavy-duty inverter with a power capacity from 3,000 to 12,000 watts.
