

Slovenia google sunroof project

What is Google Project Sunroof?

Google wants to make installing solar panels easy and understandable for anyone. Project Sunroof puts Google's expansive data in mapping and computing resources to use, helping calculate the best solar plan for customers. Project Sunroof computes how much sunlight hits your roof in a year.

Does Project Sunroof work?

Yes, Project Sunroof is specifically designed to help homeowners who are interested in going solar. It provides valuable information about the solar potential of their rooftops and helps them plan and estimate the solar installation costs. How does Project Sunroof access the data from the solar API?

How much data does sunroof process?

Sunroof processes roughly 1 petabyte (1,000 terabytes) of data: height and color for 43 million homes; weather information; about 1,000 state and local incentives; and hundreds of local electricity rates. Over the past 3 years, Sunroof has grown from a part-time project to a full-time job for Elkin and his team.

What is sunroof & how does it work?

Initially launched to drive consumer awareness and education, the service now also makes it easy for interested homeowners to connect with solar providers in their area. Sunroof covers 43 million rooftops in the U.S. -- which is more than 50% of all households -- and in the coming months will be available in all 50 states.
