

Solar Street Light Cement Pole Bracket

Do solar lights need brackets?

Brackets are almost always required for solar lighting installations. This is because the solar panel is almost always mounted to the top of the pole and the fixture needs to be mounted lower on the pole. The fixture bracket allows the fixture to mount directly to the same pole and out away from the pole at times.

What makes up a commercial solar street light?

The components that make up a commercial solar street light are similar to other commercial solar lights. Each light consists of a solar power array, battery backup, DC light fixture, controller, fixture bracket, and a pole.

What size poles do I need for a solar light system?

The poles provided for standard light applications are quite different from what is provided for a solar lighting system. Solar poles are typically very large, with a 4-6" tip and an 8-14" base, and should always be round. Square poles do not allow for mounting the solar and fixture in any direction and tie you to four direction orientations.

How to install solar panels & brackets?

Assembly of solar panels and brackets: Align the installation holes of the solar panels and brackets and tighten the screws. Pre-assembly of batteries: Place the batteries in the battery box, install the sealing ring, and thread the battery wires from the top cover wire outlet. Cover the top cover, align it with the holes, and tighten the screws.

What is a solar street light fixture?

A solar street light fixture is a particular fixture that operates off DC power. Most manufacturers have their line of fixtures and do not work with fixtures outside their main line. This is because extensive testing has been completed, and warranties exist for all components.

Are solar LED street lights a good idea?

As a result, solar LED street lights can lower installation costs, reduce the need for tons of wiring, and reduce the maintenance and project costs over the system's life. And since they are independent of the grid, you don't have to worry about problems down the line affecting every light, such as blackouts or breaks in the underground lines.

Pole: Procure a sturdy and weather-resistant pole to mount the solar panel and light fixture securely. **Mounting Hardware:** Gather the necessary nuts, bolts, and brackets for secure and stable installation on the pole. **Concrete Base:** ...

Key features Black tapered octagonal light pole Foundation cage (custom-made in galvanised steel) 90° hinge (easy access, maintenance and adjustments) Anti-theft bolts with specialised tool for hinge release
