

How are solar panels installed?

Solar panel installation requires careful planning and execution to ensure they are installed safely and effectively. The numerous mounting systems will be installed on the ground or on a roof, depending on the design of the solar project.

What is the construction and installation phase of a solar project?

With permits and financing secured, the construction and installation phase of a solar project can commence. This phase is where the physical solar panels and equipment are installed on-site and connected to the power grid. It includes several key steps that require careful planning and execution.

Can solar panels be installed without a planning system?

Changes to permitted development rights rules will mean more homeowners and businesses will be able to install solar panels on their roofs without going through the planning system. Currently those who have to go through the planning system are having to wait over eight weeks and face extra costs.

Do you need planning permission to install solar panels?

Current rules that require businesses to apply for planning permission if solar panels will generate more than one megawatt of electricity will also be scrapped, meaning organisations will be able to install more solar panels on rooftops without the delay and cost of applying for planning permission.

What is a stand-alone solar PV installation?

For the purposes of planning stand-alone solar PV installations are those that are not physically attached to a building, although they can be wired to provide electricity to a building.

How do I register a solar PV system?

If you're planning to install a solar PV system in your home, you must register it with your Distribution Network Operator (DNO). The DNO is the company responsible for bringing electricity to your home. Usually, your installer will register the device for you.
