What is Google Project Sunroof?

Project Sunroof was created by Google engineer Carl Elkin as a 20% time project. While initially launching only in the cities of Boston, San Francisco, and Fresno, the project now displays solar potential for 43 million homes in the US. Google has previously invested in projects with solar energy provider, SolarCity.

Does Project Sunroof have solar data?

We currently have solar data for portions of 50 states and Washington DC. See if we've got you covered. Project Sunroof is a solar calculator from Google that helps you map your roof's solar savings potential. Learn more, get an estimate and connect with providers.

Does Project Sunroof work?

Yes, Project Sunroof is specifically designed to help homeowners who are interested in going solar. It provides valuable information about the solar potential of their rooftops and helps them plan and estimate the solar installation costs. How does Project Sunroof access the data from the solar API?

What is sunroof & how does it work?

Initially launched to drive consumer awareness and education, the service now also makes it easy for interested homeowners to connect with solar providers in their area. Sunroof covers 43 million rooftops in the U.S. -- which is more than 50% of all households -- and in the coming months will be available in all 50 states.

How much data does sunroof process?

Sunroof processes roughly 1 petabyte (1,000 terabytes) of data: height and color for 43 million homes; weather information; about 1,000 state and local incentives; and hundreds of local electricity rates. Over the past 3 years, Sunroof has grown from a part-time project to a full-time job for Elkin and his team.

Surgoed Makelaardij NV taraf?ndan bir giri?im ve modern yenilik olan Surgoed gayrimenkul uygulamas?n? ke?fedin. Vakit nakittir. Dijital bilgi ça??n?n trendi, tüm hizmet ve ürünlerde do?rudan eri?im sa?lamakt?r.

Wie funktioniert Project Sunroof? Project Sunroof funktioniert ganz einfach und wie viele andere Solar-Tools im Internet auch. Man gibt einfach seine Adresse ein und Google kombiniert diese Standortdaten mit den Daten, die Google Maps an diesem Standort vorliegen. Dies sind die Solarstrahlung, die Verschattung durch Bäume, die Dachneigung, die Sonnenstände über das ...
