Where does Aruba get its electricity from?

Aruba currently gets 15.4% of its electricity from renewable sources. The island has sufficient renewable energy resource potential, with excellent technical potential for ocean, wind, and solar renewable energy generation.

What is thermal energy storage?

Thermal energy storage (TES) is the storage of thermal energy for later reuse. Employing widely different technologies, it allows surplus thermal energy to be stored for hours, days, or months. Scale both of storage and use vary from small to large - from individual processes to district, town, or region.

How much energy does Aruba consume annually?

Aruba has an annual consumption of 990 gigawatt-hours (GWh). Currently, about 13% of its generation comes from a 30-MW wind project and 0.9% comes from waste-to-energy (WTE) biogas. An additional renewable capacity of 34 MW is planned or in progress. Aruba's installed generation capacity is 230 megawatts (MW) with an average load of 100 MW.

What is the cost of electricity in Aruba?

The energy landscape of Aruba, an autonomous member of the Kingdom of the Netherlands located off the coast of Venezuela, is outlined in this profile. Aruba's utility rates are approximately \$0.28 per kilowatt-hour (kWh) (below the Caribbean regional average of \$0.33/kWh).

Thermal energy storage (TES) is a technology that reserves thermal energy by heating or cooling a storage medium and then uses the stored energy later for electricity generation using a heat engine cycle (Sarbu and Sebarchievici, 2018) can shift the electrical loads, which indicates its ability to operate in demand-side management (Fernandes et al., 2012).

Thermal energy storage (TES) systems are necessary for enhancing renewable energy efficiency and reliability, storing surplus energy from sources like solar and wind to bolster grid stability and energy security.

As the market for renewable energy demand grows, fueled through many programs in the US and Canada focused on incentivizing buildings to reduce carbon emissions, existing geothermal or ground source systems and thermal energy storage systems are poised to bring new opportunities to enhance efficiency and decarbonize cooling and heating.

Antora Energy in California launched a thermal energy company in 2016. Lenert and others are eyeing their own startups. And Henry recently launched a venture--Thermal Battery Corp.--to commercialize his group's technology, which he estimates could store electricity for \$10 per kilowatt-hour of capacity, less than one-tenth the cost of grid ...
