Does Venezuela's electricity system collapse?

In this paper, the collapse of Venezuela's electricity system is analyzed. Two well-known recovery plans, the Venezuelan Electricity Sector Recovery Plan (VESRP) and the Country Plan Electricity (CPE), are described in detail, and their challenges are discussed in the context of the energy transition paradigm.

Why is the energy sector stagnating in Venezuela?

The energy sector in Venezuela has fallen into a phase of stagnation - or regression - due to the mismanagement of resources and an intense policy of subsidies with political aim. As a result, in 2014 the country reported to have a fiscal breakeven point of more than 100 \$/bbl (Black gold deficits, 2014), one of the highest in the world.

What is a Venezuelan energy recovery plan (vesrp)?

Two well-known recovery plans, the Venezuelan Electricity Sector Recovery Plan (VESRP) and the Country Plan Electricity (CPE), are described in detail, and their challenges are discussed in the context of the energy transition paradigm. These plans have been proposed by non-governmental actors with different scopes and methodologies.

What are the statistics on electricity production in Venezuela?

Since 2009, there have been no official statistics on the electricity and energy sectors. Since the end of the 19th century, the production of electricity has been steadily growing in Venezuela. In between, there were some jolts due to prolonged droughts associated with the El Niño phenomenon.
